

Below is a structured **Website Development Scope** for an HR Management Portal based on your requirements. I have also separated the **access permissions**, which is important because some modules must be restricted while others should be accessible to all employees.

HR Management Portal – Website Development Scope

1. Project Objective

Develop a secure, centralized **HR Management Portal** for Pattabhi Agro Foods Pvt. Ltd. to manage employee information, HR operations, recruitment, travel allowances, assets, performance, training, employee requests, attrition and HR policies.

The portal should be **role-based**, with different access levels for:

- **Main Admin – 2 Users**
 - HR Administrators
 - Management Administrator
- **All Employees**

2. Core Modules

S.No.	Module	Main Features
1	Employee Data Management	Employee master, personal details, employment details, department, designation, joining date, salary, documents, reporting manager, status
2	Employee Travel Allowance	Travel request, advance request, travel expenses, bills, approval, settlement, status tracking
3	Employee Asset Management	Laptop, mobile, ID card, vehicle, tools, accessories, asset issue/return, asset condition, employee-wise asset history
4	Recruitment Tracker	Vacancies, job postings, candidate database, screening, interviews, selection, offer, joining, rejection, recruitment status
5	Employee Attrition Rate	Resignations, exits, department-wise attrition, monthly/yearly attrition, joining vs exit analysis, dashboards
6	Performance Review	Employee appraisal, KPI/KRA, rating, manager review, HR review, comments, final rating, review history
7	Employee Training	Training calendar, training needs, participants, trainer, attendance, feedback, certificates, training history
8	Employee Requests / Queries	Employee complaints, HR queries, requests, tickets, assigned person, response, status and closure
9	HR Policies & Documents	HR policies, circulars, forms, SOPs, employee handbook, document upload/download, acknowledgement

3. Access Control Structure

This is one of the most important parts of the system.

A. Main Admin – 2 Users

There should be **2 Main Admin accounts**:

Admin 1 – Management

Admin 2 – HR

Main Admin users should have complete control over the system, subject to management-defined permissions.

Main Admin Capabilities

- Add/edit/delete employees
 - View all employee records
 - Manage employee documents
 - Manage recruitment
 - Manage travel allowance
 - Manage assets
 - Manage performance reviews
 - Manage training
 - View employee requests/queries
 - Create/upload HR policies
 - Manage user accounts
 - Assign roles and permissions
 - Approve/reject requests
 - Generate reports
 - View dashboards
 - Export Excel/PDF reports
 - Maintain audit logs
 - Configure system settings
-

4. Employee Login

Every employee should have an individual login.

Employee Dashboard

After login, the employee should be able to see:

- My Profile
 - My Travel Allowance
 - My Assets
 - My Requests/Queries
 - HR Policies & Documents
 - My Training
 - My Performance Review, where applicable
 - Notifications
 - Pending Actions
 - Important HR Announcements
-

5. Important Access Restriction

Based on your requirement, the access should be designed as follows:

Module	All Employees	HR Admin	Management Admin
Employee Data	✓ Own Data	✓ Full	✓ Full
Travel Allowance	✓ Own Data	✓ Full	✓ Full
Asset Management	✗ Restricted	✓ Full	✓ Full
Recruitment Tracker	✗ Restricted	✓ Full	✓ Full
Attrition Rate	✗ Restricted	✓ Full	✓ Full
Performance Review	✗ Restricted	✓ Full	✓ Full
Training	⚠ Own/Assigned	✓ Full	✓ Full
Requests / Queries	✓ Own Data	✓ Full	✓ Full
HR Policies/Documents	✓ View/Download	✓ Full	✓ Full

Key principle

Employees should only see their own confidential information.

For example:

- Employee A must not see Employee B's salary.
- Employee A must not see Employee B's performance rating.
- Employees must not see recruitment candidates.
- Employees must not see company-wide attrition data.
- Employees must not see other employees' assets.
- Employees must not see HR's internal records.

6. Employee Data Management

The Employee Master should contain:

Personal Information

- Employee ID
- Employee Name
- Photograph
- Gender
- Date of Birth
- Mobile Number
- Email
- Address
- Emergency Contact

Employment Information

- Department
- Designation
- Location/Plant
- Date of Joining
- Reporting Manager

- Employment Type
- Employee Status
- Confirmation Date
- Resignation Date
- Last Working Date

Payroll/HR Information

Restricted to authorized HR/Admin users:

- CTC
- Salary details
- Bank details
- PF
- ESI
- PAN
- Aadhaar/document references
- Other statutory information

Documents

- Resume
- Aadhaar
- PAN
- Educational Certificates
- Experience Certificates
- Joining Documents
- Appointment Letter
- Other HR documents

7. Employee Travel Allowance Module

Employees should be able to submit:

Travel Request → Approval → Advance → Travel → Expense Submission → Bill Upload → Verification → Settlement

Features:

- Travel purpose
- Destination
- Travel dates
- Mode of travel
- Hotel expenses
- Food allowance
- Local conveyance
- Other expenses
- Advance requested
- Bills/receipts upload
- Total expense
- Amount payable/recoverable
- Approval status
- Settlement status

Dashboard should show:

- Pending requests
 - Approved requests
 - Advance paid
 - Expenses submitted
 - Pending settlements
 - Completed settlements
-

8. Employee Asset Management

Maintain complete employee-wise asset records.

Asset Categories

- Laptop
- Desktop
- Mobile
- SIM
- ID Card
- Laptop Bag
- Vehicle
- Tools
- Machinery-related tools
- Other company assets

Each asset should have:

- Asset ID
- Asset type
- Serial number
- Purchase date
- Purchase value
- Assigned employee
- Issue date
- Condition
- Location
- Return date
- Return condition
- Asset status

Generate **Employee Asset History** and **Asset Register**.

9. Recruitment Tracker

Recruitment should have a complete candidate pipeline:

Requirement → Sourcing → Screening → Telephonic Interview → HR Interview → Technical Interview → Management Interview → Selected → Offer → Joined / Rejected

Track:

- Position

- Department
- Location
- Candidate name
- Mobile
- Email
- Qualification
- Experience
- Current company
- Current salary
- Expected salary
- Notice period
- Interview status
- Interview date
- Interviewer
- Selection status
- Offer status
- Joining date
- Source
- Remarks

Recruitment Dashboard

- Total Open Positions
- Candidates in Pipeline
- Interviews Scheduled
- Selected
- Offers Released
- Joined
- Rejected
- Position-wise status
- Recruitment Cost
- Time to Hire

10. Employee Attrition Dashboard

The system should automatically calculate:

Attrition Rate = Employee Separations ÷ Average Employee Strength × 100

Reports:

- Monthly attrition
- Quarterly attrition
- Annual attrition
- Department-wise attrition
- Location-wise attrition
- Designation-wise attrition
- Voluntary exits
- Involuntary exits
- New Joiners vs Exits
- Average employee strength

Charts should be available on the HR dashboard.

11. Performance Review Module

Performance review should support:

Employee → Reporting Manager → HR → Final Approval

Features:

- Review period
- Employee details
- KRA/KPI
- Goals
- Performance rating
- Manager comments
- Employee comments
- HR comments
- Final rating
- Strengths
- Areas of improvement
- Training requirements
- Promotion recommendation
- Salary revision recommendation
- Final approval

Maintain historical performance records for every employee.

12. Employee Training Module

Features:

- Training calendar
- Training topic
- Trainer
- Training date
- Location
- Participants
- Department
- Training type
- Attendance
- Training feedback
- Assessment
- Certificate
- Training cost

Dashboard:

- Upcoming training
- Completed training
- Employee-wise training
- Department-wise training
- Training hours
- Training cost

- Training effectiveness
-

13. Employee Request / Query Module

Employees should have a simple **HR Helpdesk**.

Employee can submit:

- HR Query
- Leave-related query
- Salary query
- Document request
- Experience letter request
- Payslip request
- Joining document request
- General HR request
- Other request

Each request gets a **Ticket Number**.

Example:

HR-2026-000125

Status:

Submitted → Assigned → In Progress → Resolved → Closed

Employee can track only their own requests.

HR can view and manage all requests.

14. HR Policies & Documents

HR should be able to upload:

- HR Policies
- Leave Policy
- Attendance Policy
- Travel Policy
- Code of Conduct
- Employee Handbook
- Recruitment Policy
- Performance Management Policy
- Training Policy
- POSH Policy
- Safety Policy
- Circulars
- HR Forms
- SOPs

Employees should have:

View → Download → Acknowledge

Where required, the system should record:

- Employee name
 - Document name
 - Version
 - Date published
 - Date acknowledged
-

15. Dashboard

Management Dashboard

Should provide high-level information:

- Total Employees
- New Joiners
- Exits
- Attrition %
- Open Positions
- Recruitment Pipeline
- Training Status
- Pending HR Requests
- Travel Expenses
- Asset Summary
- Performance Review Status

HR Dashboard

More detailed operational information:

- Employee database
 - Recruitment pipeline
 - Upcoming interviews
 - Joining/exit tracker
 - Pending requests
 - Travel claims
 - Asset movements
 - Performance review status
 - Training calendar
 - Document expiry alerts
-

16. Notifications

The system should generate notifications for:

- New employee joining
- Interview scheduled
- Interview postponed
- Candidate selected
- Offer released
- Employee resignation
- Travel request

- Travel approval/rejection
- Asset issue/return
- Performance review due
- Training scheduled
- Employee query received
- Query resolved
- New HR policy uploaded

Notifications can initially be **in-system notifications**, with provision for future Email/WhatsApp/SMS integration.

17. Security & Control

The website should include:

- Secure login
- Password reset
- Role-based access control
- Module-level permissions
- Employee-level data restrictions
- Admin activity logs
- Login history
- Audit trail
- Database backup
- Document access control
- Session timeout
- Password policy
- Data export restrictions
- Secure database architecture

Audit Trail

The system should record:

Who → Changed What → Old Value → New Value → Date/Time

Example:

HR Admin changed employee designation from "Executive" to "Senior Executive" on 25-Aug-2026 at 11:30 AM.

18. Recommended User Roles

The system should be designed so additional roles can be created later.

Role 1 – Super Admin / Management

Role 2 – HR Admin

Role 3 – HR Executive

Role 4 – Reporting Manager

Role 5 – Employee

This will make the portal scalable rather than hard-coding access for only three people.

19. Development Phases

Phase 1 – Foundation

- Login
- User management
- Role-based access
- Employee master
- Database
- Dashboard

Phase 2 – HR Operations

- Employee assets
- Travel allowance
- Employee requests
- HR documents/policies

Phase 3 – Recruitment

- Recruitment tracker
- Candidate database
- Interview management
- Recruitment dashboard

Phase 4 – Employee Development

- Performance review
- Training management
- Training records

Phase 5 – Analytics

- Attrition dashboard
- HR analytics
- Management dashboard
- Reports

Phase 6 – Security & Testing

- Permission testing
- Data security
- Audit logs
- Backup
- User acceptance testing

Final Proposed Portal Structure

HR PORTAL

- Dashboard
- Employee Management
- Travel Allowance
- Asset Management

- Recruitment Tracker
- Attrition Analytics
- Performance Review
- Training Management
- Employee Requests / Queries
- HR Policies & Documents
- Reports
- Notifications
- User & Role Management
- System Settings
- Audit Logs

Main Admin: HR + Management

Employees: Individual login with restricted access.

The most important design principle should be **“Role-Based + Employee-Level Access”**, so confidential HR information is never exposed to unauthorized employees.
